

Taller NoSQL: MongoDB Compass + MNIST

Bryan Stiven Gomez Taborda

conversión a PNG e inserción a Compass desde Jupyter Notebook de Colección MNIST
y Colección Images:

```
[15]: # Requiere que antes ya hayas definido: DATA_DIR, discover_mnist(), ensure_pngs()

if 'ensure_pngs' not in globals():
    raise NameError("Falta definir ensure_pngs(...). Ejecuta antes la celda donde se declara la función.")

if 'paths' not in globals():
    if 'discover_mnist' not in globals():
        raise NameError("Falta discover_mnist(...). Ejecuta antes su celda.")
    paths = discover_mnist(DATA_DIR) # construye paths si aún no existe

PNG_ROOT = ensure_pngs(paths)
print("PNG_ROOT:", str(PNG_ROOT))
```

No se hallaron NPZ/IDX/PNG. Descargando MNIST (keras.datasets)...

Modelo keras y Entrenamiento:

```
model.save("models/mnist_model.keras")

# (opcional) formato HDF5 Legado (.h5) - mostrará un WARNING, pero funciona
model.save("models/mnist_model.h5")

# Para exportar a SavedModel (carpeta) para TF Serving / TFLite:
model.export("models/mnist_savedmodel") # <-- ESTA es la API correcta en Keras 3
```

WARNING:absl:You are saving your model as an HDF5 file via `model.save()` or `keras.saving.save_model(model)`. This file format is considered legacy. We recommend using instead the native Keras format, e.g. `model.save('my_model.keras')` or `keras.saving.save_model(model, 'my_model.keras')`. Saved artifact at 'models/mnist_savedmodel'. The following endpoints are available:
