

Taller NoSQL: MongoDB Compass + MNIST

Bryan Stiven Gomez Taborda

conversión a PNG e inserción a Compass desde Jupyter Notebook de Colección MNIST y Colección Images:

```
Inserción train: 60000it [00:32, 1858.81it/s]
Insertados 60000 documentos en split='train'.

Inserción test: 10000it [00:02, 3433.42it/s]
Insertados 10000 documentos en split='test'.

{'ns': 'mnist_local.images',

 'type': 'file',
```

The screenshot shows the MongoDB Compass interface. On the left, the 'Connections' panel shows a connection to 'Conexion BD' and a list of databases including 'MNIST' and 'mnist_local'. The 'mnist_local' database is selected, and the 'images' collection is visible. The main panel shows the 'documents' tab for the 'images' collection, displaying 70,000 documents. A query bar at the top allows for filtering documents. Below the query bar, there are buttons for 'ADD DATA', 'EXPORT DATA', 'UPDATE', and 'DELETE'. The document list shows three entries, each with a unique '_id', a 'split' value of 'train', a 'label' of 0, and a 'png' field containing a binary image. The 'path_hint' field indicates the location of the image file on the local disk.

Visualización Rápida en NoteBook:

5) Visualización rápida desde MongoDB

```
[18]: import matplotlib.pyplot as plt

doc = coll.find_one({"split":"train"})
img = Image.open(io.BytesIO(doc["png"]))
plt.imshow(img, cmap="gray")
plt.title(f'label={doc["label"]}, size={img.size}')
plt.axis("off")
plt.show()
```

label=0, size=(28, 28)

Modelo keras y Entrenamiento:

```
model.save("models/mnist_model.keras")

# (opcional) formato HDF5 legado (.h5) - mostrará un WARNING, pero funciona
model.save("models/mnist_model.h5")

# Para exportar a SavedModel (carpeta) para TF Serving / TFLite:
model.export("models/mnist_savedmodel") # <-- ESTA es La API correcta en Keras 3
```

WARNING:absl:You are saving your model as an HDF5 file via `model.save()` or `keras.saving.save_model(model)`. This file format is considered legacy. We recommend using instead the native Keras format, e.g. `model.save('my_model.keras')` or `keras.saving.save_model(model, 'my_model.keras')`. Saved artifact at 'models/mnist_savedmodel'. The following endpoints are available:

* Endpoint 'serve'

args_0 (POSITIONAL_ONLY): TensorSpec(shape=(None, 28, 28, 1), dtype=tf.float32, name='keras_tensor')

Output Type:

TensorSpec(shape=(None, 10), dtype=tf.float32, name=None)

Captures:

1795916101584: TensorSpec(shape=(), dtype=tf.resource, name=None)
1795914436048: TensorSpec(shape=(), dtype=tf.resource, name=None)
1795919242128: TensorSpec(shape=(), dtype=tf.resource, name=None)
1795916089488: TensorSpec(shape=(), dtype=tf.resource, name=None)
1795916101776: TensorSpec(shape=(), dtype=tf.resource, name=None)
1795919240400: TensorSpec(shape=(), dtype=tf.resource, name=None)
